

First Python program - doing calculations

xkcd is a “webcomic about romance, sarcasm, math and language”. Every now and then, you’ll find a gem like this:

Also, I hear the 4th root of $(9^2 + 19^2/22)$ is π .

Verify the above claims by running the calculations on a Python shell. Also, write a Python script that does the same. Your script should print out the values when it is run.
